ForensiKit

Safety Tips

Warning

As with any powder, avoid inhaling thief detection powder as much as possible.

When applying it, wear a dust mask, if you have one.

Tips

Apply the invisible thief powder lightly so it won't be seen on the surface. Resist the urge to over-apply.

Thief detection powder is not tacky and therefore can be easily wiped off any surface.

Thief detection powder and paste will remain on surfaces for several days if not cleaned off.

You can remove invisible theft powder from hands and surfaces with soap and water.

Thief detection paste is ideal for vertical surfaces like fire alarms where the powder would fall off.

When applying tinted powder or paste, match the color to the color of the item you're putting it on if you don't want anyone to notice it's there.

Thief detection powder and paste are non-toxic.
